CENTRAL GRADS
FOCUS ON HEALTH CARE

CENTRAL IS WHERE
UNDERGRADUATES BECOME HEALTH CARE PROFESSIONALS

www.central.edu
We talked to eight Central alumni doing graduate study in a physician assistant program as well as medicine, dentistry and occupational therapy. Each described a unique inspiration and path to studying health care. They sound like a well-orchestrated chorus when it comes to how Central prepared them. The harmonics vary, but the themes that inspired and nurtured them come through loud and clear, including:

- Experiential learning via community service, internships and job shadowing.
- Teamwork and leadership experience in both academic and co-curricular activities.
- Many of those we talked to said they found graduate study in health care much like their Central education: challenging, immersive, multi-disciplinary, interactive and rewarding, with academic, real-world and people-to-people aspects. Many felt better-prepared than their grad school classmates who had a lecture-based university education.
- Their advice to current Central undergraduates? Take advantage of all that Central has to offer rather than concentrate on only prerequisites to graduate study.

“Focus on the journey,” says Riley Gray ’17, who is studying dentistry at the University of Iowa. “I see people in professional school who focused on the grindstone but weren’t experiencing anything else. At Central, I got it all—athletics, academics, pre-professional advising—and I am very grateful.”

Nick Lind ’06, a medical student at the University of Iowa, goes even further. Well-rounded undergraduate experiences not only result in a richer life, he believes, but also a better chance at gaining entrance to a graduate program. “Enjoy life!” he advises undergraduates. “Study abroad, do service work. Those experiences can help you get in.”

For a liberal arts college, Central College sends a heck of a lot of graduates into health professions these days. You might expect a bunch of science, psychology and athletic training majors to choose that path. But at Central, even majors in business, sociology, Spanish, cultural anthropology and more choose such programs. It’s a relatively recent trend. So we decided to investigate.

**AN ASTOUNDING 58 PERCENT OF CENTRAL GRADUATES WHO GO TO GRAD SCHOOL DO SO IN HEALTH-RELATED FIELDS. WHY?**

BY: CINDY DEPPE
PHOTOS: LINDA STELTER

**HEALTH CARE: CENTRAL GRADS’ TOP CHOICE FOR GRAD SCHOOL**

**A LIBERAL ARTS EDUCATION.**

“The liberal arts open up possibilities to study anything that sparks a passion,” Valster says. “We challenge our students to think broadly and critically. Central students’ communication and interpersonal skills and extracurriculars stand out. We believe a pre-health student can major in anything and be a successful applicant to professional school.”

**FACULTY MENTORING.**

“Our students have the opportunity to complete honors projects or research in one-on-one collaborations with professors,” Valster says. “That enables faculty to really get to know students and provide them with hands-on experiences that they might not get at larger institutions. These faculty-student mentorships allow faculty to write strong recommendation letters for our students.”

**STRONG PREPROFESSIONAL ADVISING.**

“In this role, I work with everyone from first-year students curricular mapping to seniors who are completing applications and setting up interviews with professional schools,” Valster says. “I also work closely with faculty and I’m in continuous contact with graduate schools about admission requirements and bringing counselors to campus.”

**REAL-WORLD EXPERIENCES.**

The Center for Community-Based Learning helps arrange service learning opportunities where students can test their interest in health care and other careers. The Center for Career and Professional Development helps students prepare résumés or hone interview skills for graduate programs as well.

**THE HEALTH PROFESSIONS CLUB**

This club matches underclassmen to upperclassmen with similar interests and connects students to professional schools and practitioners. Nicole Palenske, associate professor of biology and one of the club’s two faculty advisors, says many first-year students arrive fixed on entering medical school. But through their exposure to alumni and other practitioners “find that other options such as physician assistant or nurse practitioner may offer a better fit.” She says no matter what professional program they end up applying to, “these experiences make for more well-rounded students, which is attractive to graduate programs.”

**SAVVY STUDENTS.** “Students understand the potential for health care career opportunities and are gaining experience in various settings earlier in their careers,” Valster says. They’re also aware of the growing interest in health care and other careers.

**HIGH ACCEPTANCE RATE AT THE UNIVERSITY OF IOWA’S TOP-RATED HEALTH PROGRAMS.**

Katselin (Gannon) Valster, lecturer in exercise science and Central’s pre-health adviser, cites these reasons for Central’s track record in placing graduates in professional health care programs:

**AFFILIATE RELATIONSHIPS WITH HEALTH CARE GRADUATE PROGRAMS at Allen College of Nursing, Palmer College of Chiropractic and Washington University in St. Louis give Central students a leg-up into programs at those institutions.**

**CENTRAL’S RECIPE FOR SUCCESS**

**A WELL-ROUNDED, INTERDISCIPLINARY LIBERAL ARTS EDUCATION** that develops flexibility and creative problem solving.

**PERSONAL ATTENTION, SUPPORT AND MENTORING from professors.**

**RESEARCH OPPORTUNITIES.**
Here’s what eight recent Central graduates have to say about why they’re interested in the health care field and how Central prepared them for graduate study.

**Andie Arthofer ’17**

**Hometown:** Dubuque, Iowa  
**Central Major:** Exercise Science  
**Now Studying:** Medicine with Global Health Distinction  
**Institution:** University of Iowa Carver College of Medicine  
**Why Health Care:** “I always wanted to be in the field, but my classes in exercise science with Sara Shuger Fox, assistant professor of exercise science, piqued my interest in preventative, lifestyle-focused medicine.”  
**How Central Prepared Me:** “My service-learning experience with the wellness coordinator at Pella Manor while in Professor of Psychology Keith Jones’ adult development class led to an internship the following year. Then I helped provide Spanish-language health care to immigrant farmworkers. My favorite research projects included the cognitive neuroscience research I did with Ashley Scolaro, associate professor of psychology, about prospective memory and co-authoring a presentation with Sara Shuger Fox on how vitamin D affects muscle in athletes.”

**Rachael Barnette ’18**

**Hometown:** McHenry, Illinois  
**Central Major:** Psychology  
**Now Studying:** Occupational Therapy  
**Institution:** Craigflower University School of Health Professions  
**Why Health Care:** “I fell in love with the profession when I got a chance to shadow an occupational therapist in Pella. I’ve always loved helping others and working closely with other people. I plan to specialize in neonatal intensive care or in sensory processing and eventually work in a hospital or outpatient pediatric clinic.”  
**How Central Prepared Me:** “Central did a great job of helping me find relevant classes and taught me professional communication and teamwork skills that are already helping me tremendously. By providing me with diverse internship and volunteer experiences, my knowledge-base coming into an occupational therapy program is much wider than many of my peers.”

**Elizabeth “Liz” Daniels ’15**

**Hometown:** Oconomowoc, Wisconsin  
**Central Major:** Biochemistry  
**Now Studying:** Physician Assistant specializing in either Emergency Medicine, Surgery or Cardiology  
**Institution:** Nova Southeastern University, Fort Myers, Florida  
**Why Health Care:** “A high school classmate died due to a congenital heart defect. As I watched his family and the entire community struggle to understand what could have caused the death of such a young person, I became determined to understand the medical aspect of what had happened. I chose a career in health care because I knew I could play an integral part in an educational team-based approach to patient care, and help those in situations similar to what my community went through.”  
**How Central Prepared Me:** “My four years on the women’s soccer team instilled the values and skills of self-discipline and time management that are essential to any professional path. Also, the majority of my colleagues here went to large schools where class sizes were often over 300 students. At Central, I knew my classmates and my professors individually, and I was not afraid to ask for help, which is necessary when working on a team.”

**Abby Fyfe ’18**

**Hometown:** Pella, Iowa  
**Central Major:** Biochemistry  
**Now Studying:** Medicine  
**Institution:** University of Iowa Carver College of Medicine  
**Why Health Care:** “At first I thought I wanted to do medical research. But after shadowing physicians and doing research at Central, I realized my heart was in patient care. And as an M.D., I can still do research. My end goal is to work in an academic medical center neonatal or pediatric intensive care unit in the United States and to travel abroad to help start ICUs in developing nations.”  
**How Central Prepared Me:** “Dr. Joe Brummel and his wife, Diana, taught me about selfless leadership. That kind of one-on-one influence is something you rarely get at a large institution, where most science classes have 100 to 500 students.”

**Riley Gray ’17**

**Hometown:** Waukee, Iowa  
**Central Major:** Physics  
**Now Studying:** Dentistry  
**Institution:** University of Iowa College of Dentistry  
**Why Health Care:** “Anyone who goes into health care wants to help people. I chose dentistry so I could have a lasting impact on the physical, social and emotional health of my patients.”  
**How Central Prepared Me:** “Liberal arts provide a different outlook on problem solving, which is something you do every day in dental school. As I talk with my peers here, I also appreciate how blessed I was at Central to have small classes and professors who wanted to see me succeed. Pella as a community is great, too. The health professionals are already helping me tremendously. Andie Arthofer ’17, right, discusses a medical procedure with a classmate.
Many Central alumni are already health care professionals. They include senior living facility administrators, nurse case managers, palliative care physicians, nuclear pharmacists, family physicians, endodontists, cardiologists and more. Two of the latest to begin practicing:

MEGAN LEHR ‘10
Hometown: Indianola, Iowa
Central Major: Biology
Graduate School: Des Moines University
Now Practicing: Family Medicine
Location: Indianola, Iowa
Why Health Care: In a story in the Des Moines Register, Lehr said her father was a doctor, but never really pushed her to enter medicine. “I kind of grew up in the clinic so it just felt like home,” she said—and that it was her love of science and fixing things that drew her to medicine. Now, she and her father work together in the same clinic.

For the full story: dmreg.co/2wNhLtI

TYLER WALLINGFORD ‘11
Hometown: Atlantic, Iowa
Central Major: Athletic Training
Graduate School: Creighton University; University of Iowa College of Dentistry
Now Practicing: Dentistry
Location: Fort Dodge, Iowa
Why Health Care: “Central’s athletic training program allowed me to explore other healthcare options. When I was on rotation in Pella, something caught my eye at the dental office.”

How Central Prepared Me: “My classes and independent research experiences encouraged self-directed, lifelong learning. I spent a semester abroad in Wales, sung in the A Cappella Choir, completed a cancer research internship with a Central alumna, conducted independent chemistry research and was a teaching assistant for introductory biology labs—all while completing a double major and minor. In the always-changing field of medicine, diverse experiences and self-directed, lifelong learning are vital for success.”

WHY CENTRAL CLASSES IN EXERCISE SCIENCE, ESPECIALLY WITH DR. SHUGER FOX, HELPED ME DEVELOP A PASSION FOR PREVENTATIVE, LIFESTYLE-FOCUSED MEDICINE. BASED ON MY STUDY ABROAD EXPERIENCE IN MÉRIDA, MEXICO, SEEING FIRST-HAND HOW PROFESSIONALS FROM ALL CULTURES AND SPECIALTIES CAN WORK TOGETHER, I PLAN TO PURSUE THE GLOBAL HEALTH DISTINCTION CERTIFICATE.”

– ANDIE ARTHOVER ’17

WHAT MAJORS GO WHERE?
This diagram tracks Central alumni whose majors led them to pursue health care graduate programs. The thickness of the connecting lines correspond to the relative number of students.
“MY STUDY ABROAD EXPERIENCE IN MÉRIDA AS WELL AS MY SUMMER RESEARCH EXPERIENCE ARE LEADING ME TO CONSIDER A SPECIALTY IN NEONATOLOGY. MY GOAL IS TO WORK IN AN ACADEMIC MEDICAL CENTER NEONATAL OR PEDIATRIC INTENSIVE CARE UNIT IN THE UNITED STATES AND TO TRAVEL ABROAD TO HELP START ICU’s IN DEVELOPING NATIONS.”

— Abby Fyfe ’18
Major: Biochemistry
Now Studying: Medicine
Institution: University of Iowa Carver College of Medicine
Iowa City, Iowa
